Luong-Ha Nguyen

Artificial Intelligence & Machine Learning Engineer

Experienced AI/ML Engineer with a background in developing and optimizing learning paradigms as well as AI/ML pipelines, including modeling, validation, and deployment strategies in production. Skilled in uncertainty modeling and machine learning approaches, with a notable track record in driving innovation in manufacturing, renewable energy, infrastructure monitoring, and aerospace sectors through interdisciplinary teamwork.

PROFESSIONAL EXPERIENCE

Machine Learning Engineer at AI Redefined | Montreal, QC, CA — July, 2022 - present
- Develop end-to-end machine learning pipelines for time series forecasting and anomaly detection, using reinforcement learning with human feedback to continually enhance accuracy through insights from operators and asset managers.
- Lead the development of vision-based detection algorithms using reinforcement learning with human feedback.
- Spearhead research initiatives with both industrial and academic partners.

Applied Research Associate at Polytechnique Montreal | Montreal, QC, CA — May, 2022 - present
- Lead and coordinate a team of PhDs and postdocs in the collaborative development of an efficient learning paradigm for deep neural networks to enhance accuracy and reduce training time across various learning tasks.
- Lead the technical development of open-source software cuTAGI.
- Lead the technical development of Python interface for integration with the C++/CUDA backend.

Machine Learning Engineer at Shearwater Aerospace | Montreal, QC, CA — September, 2021 - June, 2022
- Developed machine learning-based path planning system to improve UAV flight efficiency.
- Developed an autonomous control system using reinforcement learning for UAVs.

Postdoctoral Researcher at Polytechnique Montreal | Montreal, QC, CA — November, 2019 - September, 2021
- Formulated a theoretical approach for modeling uncertainty in deep neural networks.
- Implemented and tested the proposed approach on supervised, unsupervised, and reinforcement learning tasks.

SKILLS

Tech Stack: C/C++, CUDA, Python, MATLAB, JavaScript, React, Terraform, AWS, Azure, Cloud Computing, Microservices, gRPC, REST API, Kubernetes, PostgreSQL, Docker, GitHub, Helm Charts

AI/ML: PyTorch, TensorFlow, Numpy, Pandas, Scikit-learn, Probability & Statistics, Reinforcement Learning, Machine Learning Theories, Supervised Leanring, Unsupervised Leanring

Languages: Fluent in English and French, with native proficiency in Vietnamese

EDUCATION

Ph.D. in Computer Science for Civil Engineering at Polytechnique Montreal | Montreal, QC, CA — October, 2019

PERSONAL PROJECTS

cuTAGI for Bayesian Neural Networks (2018-present) | https://tagiml.com
- cuTAGI: An open-source Bayesian neural network developed in C++/CUDA. It quantifies uncertainty in deep neural networks for various learning tasks, enhancing output reliability and accuracy.

Transformer Temporal Fusion (2023) | Source code: https://github.com/lhnguyen102/tft-sgd
- Implementation of the Transformer Temporal Fusion (TFT) method, leveraging self-attention mechanisms for enhanced accuracy and detailed explainability in time series forecasting.
